

HRGenius

Every workday.
A little more human.

An employee-centered system that connects
people, decisions and everyday progress.

Start exploring →

A clear path from problem to product.

Choose a chapter. Every olive button is clickable in Slide Show mode.

01 / Why it matters

The problem + people

Turn scattered HR work into a shared flow.

Three common problems. One connected workplace.

Scattered records

One employee context

Profiles, documents and reporting lines

Repeated follow-ups

A visible next step

Requests, ownership and status

Hard-to-read data

Useful daily insight

Workforce trends and readable values

A dashboard with a reason for every element.

Editable interface diagram · illustrative layout, not live employee data

Human first

A greeting and relevant next actions.

Readable insight

Switch periods; inspect values or a table.

Everyday appreciation

Celebrate a teammate with real feedback.

[View the real UI + dark mode →](#)

Six connected stages. One employee journey.

Follow the arrows through the product's functional scope.

1. Attract & welcome

Careers · interviews · offers
Onboarding plans and tasks

2. Know your people

Profiles · org chart · files
Organization masters · assets

3. Manage the day

Attendance · regularization
Leave balances · approvals

6. Support & understand

Tickets · policies · acknowledgements
Analytics and personal summary

5. Grow & recognize

Goals · reviews · progress
Praise and feedback

4. Pay with structure

Components · runs · adjustments
Payslips and exports

[Technical module catalogue →](#)

Make the next step obvious.

Example: an employee requests leave. Policy and permissions shape the outcome.

Good systems also notice good work.

A praise wall adds recognition to everyday operations.

[Try the appreciation tour →](#)

A clear boundary between experience and rules.

An editable architecture diagram of the current application.

REST

JPA

Angular 18

UI · routes · Material
Signals · accessible controls

Spring Boot

REST · validation · security
Services · JPA repositories

Persistence

Oracle target / H2 demo
Flyway schema migrations

Supporting services Files + metadata / Mail / Audit history / OpenAPI

Three gates before sensitive information.

The backend enforces access. The interface makes that access understandable.

Who are you?

JWT + refresh rotation
BCrypt + login lockout

What may you do?

Roles + permissions
Self / team / HR scope

What may you see?

Selected field encryption
Masking + controlled reveal

Cross-cutting controls: audit history, input validation and validated file handling.

The experience was checked from several angles.

Recorded frontend checks in this workspace. No production certification is implied.

Page / theme scans

Interaction checks

Mobile routes

Frontend production build passed.
Zero reported automated accessibility violations.

Next: Oracle acceptance, business-flow regression, load and recovery.

What would you like to try first?

Three quick demonstrations, each with an offline fallback.

Explore

Change the period.
Inspect an exact value.

Choose another interaction →

The complete scope, grouped for review.

All API roots below are prefixed with /api/v1. Full method contracts live in the controllers / OpenAPI.

PEOPLE & ORGANIZATION

/employees · /org · /org-chart

/documents · /assets · /me

Profiles, statutory data, files, reporting lines, masters, asset assignments and personal summary.

TIME & APPROVALS

/attendance · /holidays

/leave · /approvals

Daily records, regularization, calendars, balances, requests, accrual and approval steps.

TALENT & PAY

/recruitment · /public/careers

/onboarding · /payroll

Applications, interviews, offers, starter tasks, components, runs, adjustments and payslips.

GROWTH, SUPPORT & CONTROL

/performance · /helpdesk · /policies

/analytics · /audit-logs · /auth

Reviews, goals, praise, tickets, acknowledgements, insight, audit history and authentication.

An employee-centered model with history.

Selected logical relationships; the migrations contain the full physical schema.

Ready to demonstrate. Room to grow.

Keep implementation, verification and future work distinct.

RUN THE PROJECT

Development & deploy

- Angular frontend
- Spring Boot REST backend
- Oracle deployment / H2 demo
- Docker Compose configuration
- File storage + mail service

CHECK THE PROJECT

Quality evidence

- Frontend build + UI checks
- Backend test sources present
- Oracle acceptance still needed
- Business-flow regression
- Manual accessibility review

EVOLVE THE PROJECT

Proposed next steps

- Deeper role-based dashboards
- Chart-to-record navigation
- SSO and stronger operations
- Monitoring + recovery drills
- Measured user feedback
